

WANG QUAN

Junior AI Application / Full-Stack Developer

Computer Science graduate focused on AI application and full-stack development. Built a production WeChat mini program for course booking and verification, and developed an AI digital human creation platform for voice cloning, media management, and lip-sync video workflows.

CORE STACK

Frontend	React, TypeScript, Next.js, Vite, WeChat Mini Program, Tailwind CSS, shadcn/ui
Backend	Node.js, Express, REST APIs, validation, task polling, transaction-aware business logic
Database	MySQL, SQL migrations, Excel import workflows, eligibility data modeling
AI / Media	Voice cloning workflows, lip-sync video generation, RunningHub OpenAPI, media upload flows
Deployment	Git, GitHub, Vercel, npm/pnpm, PM2, Tencent Cloud deployment notes

SELECTED PROJECTS

TCM Course Booking & Verification Mini Program

Production v1.0 released | WeChat Mini Program, React, Node.js, MySQL

- Built a full booking ecosystem with a WeChat mini program, React/TypeScript admin dashboard, Node.js API, and MySQL database for course reservation and staff verification workflows.
- Implemented login, phone binding, purchase eligibility checks, purchased-course-only display, booking, capacity control, waitlist handling, and QR-code based verification.
- Developed admin workflows for course/session management, appointment and waitlist records, verifier accounts, Excel purchase-list import, import exceptions, student eligibility, and system settings.
- Supported production operation with deployed API/admin domains, Tencent Cloud server deployment, MySQL migrations, PM2 restart flow, and production data safeguards.

AI Digital Human Creation Platform

Portfolio project | Next.js, TypeScript, RunningHub OpenAPI, Tailwind CSS

- Developed a full-stack AI media workspace for creating digital human content from uploaded voice and portrait materials.
- Built voice synthesis features that accept script text and reference audio, call a voice-cloning workflow, and return generated audio for preview and download.
- Built video synthesis features that combine a selected portrait image with generated or uploaded audio to create lip-sync digital human video output.
- Implemented material library upload/list/delete flows, audio playback, image preview, task timers, cancellation, polling for RunningHub outputs, and file validation.

ADDITIONAL PROJECTS

Selected Coursework Project Gallery

Private GitHub repositories | [React Native](#), [Django](#), [Node.js](#), [Python](#), [C++](#), [p5.js](#)

- Organized 20 cleaned private GitHub repositories from SIM coursework, separating formal projects from early exercises and excluding reports, large files, generated caches, assignment documents, and private data.
- Built a portfolio gallery covering React Native mobile apps, Django/DRF platforms, Express database apps, NLP notebooks, C++/JUICE audio programming, and p5.js creative coding.

ThriftMate Mobile App

[Expo](#), [React Native](#), [React Navigation](#)

- Built a mobile coursework app with browse, detail, and favorites flows plus reusable UI structure.

Django E-Learning Platform

[Django](#), [DRF](#), [Channels](#)

- Built coursework platform code across course management, accounts, templates, static assets, and chat-related modules.

IMDB Sentiment Analysis

[Python](#), [Jupyter Notebook](#), [NLP](#)

- Completed an NLP coursework notebook for movie-review sentiment analysis and model-result explanation.

C++ / Creative Coding Coursework

[C++](#), [JUICE](#), [JavaScript](#), [p5.js](#), [matter.js](#)

- Completed supporting projects including a JUICE DJ/audio app, OOP data-processing projects, and interactive graphics demos.

EDUCATION

Bachelor Degree in Computer Science

University of London | Jan 2023 - Oct 2025

Diploma in Information Technology

Singapore Institute of Management | Jun 2021 - Aug 2022

INTERVIEW TOPICS

- Full-stack feature design from UI forms to API routes and SQL-backed persistence.
- WeChat mini program booking, waitlist, QR verification, and admin workflow design.
- AI media workflow integration with polling, cancellation, file validation, and generated-output handling.
- How coursework projects were cleaned, classified, and prepared as private GitHub repositories.
